

GIVE CLEAN WATER WHERE IT'S NEEDED MOST...

This is a life-changing gift for the Aeta communities that turns their thirst and hunger into HOPE!

Each of the approximately 1,000 Aeta tribes has an average of 200 families per village. As we continue to visit many Aeta villages, we have learned that in most cases, there is no running water or a nearby well. Instead, the Aeta must travel an hour or two to fetch water from springs and/or surface water. This is often a chore left to mothers; should they get injured, the whole family suffers.

One of the most recent milestones for us has been discovering new spring waters in the villages. This is one burden we can help ease by building cement water tanks to restore and protect spring waters found in the forest. Capturing the water in the cement tank during the night allows the tank to be completely filled with water. This collects, rather than wastes, the spring waters. Without the water collection tank, each Aeta who wants water is forced to wait in line for between 30 minutes to an hour to fill a 5-gallon container. Consequently, many of the Aeta spend their time in this unproductive manner.

When you sponsor a development project to build the cement water tank, we will install a personalized and engraved plaque with your name or a list of donors' names in a prominent location so that the public will be made aware of your financial contribution.

Your donation will truly make a difference to in the lives of the Aeta, helping them escape from thirst and hunger. We are an IRS approved charity, and your donations can be written off on your US tax returns.

Platinum Donor: \$1,000 plus
